Through third party advertising of events such as Formula One and CART auto racing, tobacco brand names continue to attain visibility to a vast audience.

Sponsoring sports events is meant to serve a number of marketing objectives for a corporation and its products, including increasing brand awareness, reinforcing or enhancing brand image, and improving sales or market share. Moreover, tobacco manufacturers have used sponsorship as a means of circumventing advertising regulations or restrictions. Once cigarette advertising was banned from the broadcast media in the UK in 1965, in the USA in 1971, and in Canada in 1972, individual tobacco companies increasingly turned toward sponsoring broadcast sports events to compensate for lost advertising exposure. Despite cigarette advertising not being permitted on television in such countries, auto racing sponsorship serves as a particularly good example of how tobacco companies continuously gain widespread exposure for their respective brands. Citing Sponsors Report, it has been reported that Marlboro received nearly 3.5 hours of in-focus exposure during the 15 races of the 1989 Championship Auto Racing Teams (CART) season and a videotape recording of the Marlboro Grand Prix on 16 July 1989 revealed that Marlboro was seen or mentioned 5933 times.

More recently, Sponsors Report data indicate that from 1997 through 1999 tobacco companies achieved 169 hours of television advertising exposure through sponsoring motor sports events held in the USA, which was estimated to be equivalent to US$411 million in advertising value.

Additional objectives for sport sponsorship are cross-promotional/co-sponsorship opportunities, as well as enhancement of trade relations and goodwill. Tobacco companies are seldom the exclusive sponsors of an event or team, and in the case of auto racing, multiple sponsors are inevitable considering the exorbitant operating budgets that characterise the sport. Scuderia Ferrari Marlboro, McLaren Mercedes, and British American Racing (BAR) Honda represent the Formula One (F1) racing teams with the largest budgets for the 2001 season, spending $284.4 million, $274.6 million, and $194.5 million, respectively. While there is a long list of sponsors for each of these teams, tobacco companies represent a particularly significant source of funding. Philip Morris, in its partnership with Ferrari, spends roughly $23 million each year toward race car driver Michael Schumacher’s salary, and about $65 million toward having Marlboro placed in multiple locations of the race car, helmet, and overalls of Schumacher and his team mate Rubens Barrichello. German cigarette manufacturer Reemtsma, through its West brand, is a key sponsor of the McLaren team, spending $37 million annually for similar sponsor name locations. British American Tobacco, as the primary backer of BAR, contributed about $47 million during the 2000 season. Collectively, tobacco manufacturers annually spend $250 million toward F1 teams.

Strategic alliances or partnerships formed with auto racing co-sponsors provide tobacco manufacturers with opportunities to attain visibility and exposure for their respective brands through co-sponsors’ third party advertising. In such advertising, the symbolic imagery that is linked with particular cigarette brand names may be enhanced when surrounded by other products possessing similar desired symbolic qualities. Third party advertising potentially serves a third purpose since co-advertisers in some cases share the advertising costs, permitting each respective company to get a greater bang for their buck (that is, given a set budget, a greater number of exposures are achieved).

To demonstrate the primary purposes fulfilled by third party advertising, this paper draws from marketing literature on sponsorship objectives (including the benefits and disadvantages of being a co-sponsor of racing properties), cites examples from news and trade sources, and utilises interviews with two senior advertising practitioners who have worked on tobacco accounts. While this paper focuses on the dynamics of co-sponsorship in F1 auto racing and, to a lesser extent, CART auto racing, the general concepts are applicable to other types of motor sports sponsored by tobacco corporations, including the Indy Racing League, the National Association of Stock Car Racing (NASCAR) series, and the National Hot Rod Association (NHRA) series.

TOBACCO EXPOSURE THROUGH THIRD PARTY ADVERTISING

Cigarette brand names are visible through the promotion of unrelated products, which are auto racing co-sponsors. A 1990 Philip Morris document acknowledged that, in Taiwan, they had “developed an [F1] alliance with TAG Heuer watches, whereby TAG Heuer places print as well as outdoor advertising, two restricted mediums,
in which our car is prominently featured. Newspaper circulation alone exceeded 2 million". Like Philip Morris, Swiss watch manufacturer TAG Heuer has been a long time F1 sponsor. TAG Heuer has provided timing services for F1 auto racing events since 1969, initiated its timekeeping assistance to the F1 Ferrari race team in 1971, and has acted as the official timekeeper of the F1 championships since 1992.17

TAG Heuer is now a partner of the McLaren race team, and as a result of this partnership, West is a cigarette brand presently attaining exposure through third party advertising (fig 1). According to the watch manufacturer’s website, “in 2001, TAG Heuer is naturally pursuing its privileged partnership with West McLaren Mercedes”. TAG Heuer currently supports a few select athletes and among them are McLaren F1 drivers Mika Hakkinen and David Coulthard.

Honda, Hewlett-Packard, and Molson represent additional companies that have repeatedly engaged in third party advertising for tobacco manufacturers. Honda is a technical partner and engine supplier for the BAR and Jordan F1 teams.18 With Lucky Strike and Benson and Hedges as respective co-sponsors of these teams, the cigarette brands have been gaining significant visibility through Honda promotions (fig 2). Honda is also the engine supplier for the Marlboro Penske and KOOL Green CART teams, and through feature articles on the race teams in its custom magazine Velocity, has provided exposure for the Marlboro and KOOL brands.19

Hewlett-Packard has been a Jordan sponsorship partner and technology provider since 1990, the year the Jordan team began racing in F1.20 Hewlett-Packard has engaged in advertising that not only gives visibility to Benson and Hedges, but surprisingly uses the colours linked with Benson and Hedges packaging as opposed to the colours representative of their own company (fig 3).

As a final but not exhaustive example, advertising for Canada’s largest producer of beer, Molson Breweries, has given visibility to the Canadian cigarette brand, Player’s (fig 4). The Molson Take Care advertisement from 1998 features CART auto racing driver Greg Moore, who at the time was sponsored by Player’s, but died in 1999 as a result of a crash during the Marlboro 500 race. While Moore is depicted in his racing gear by Player’s, but died in 1999 as a result of a crash during the Marlboro 500 race. While Moore is depicted in his racing gear alongside the ad copy states, “This isn’t a racing poster. It’s a don’t be stupid poster. Don’t drink & drive”. There is a certain level of irony associated with this promotion since the message is to act responsibly, yet a cigarette brand is represented.

Both Molson and Player’s have been long time sponsors of Indy car racing (now known as CART racing) in Canada. Molson is the title sponsor of CART races held in Toronto and Van-
Racing sponsors are often bound by the terms of their sponsorship deals to use official team photographs in any piece of communication that exploits their connection to the world of motor sports. At the very least, teams ask for final approval of the advertising, which can be withheld if other sponsors are being treated unfairly. Approved images clearly display the names or logos of team sponsors, and this is especially true in the case of key sponsors who occupy the most “real estate” on the cars and other team assets. According to one senior advertising and promotions practitioner, who has worked on major tobacco brands in the Canadian market for the past several years: “Sponsorship agreements and accompanying rights govern everything . . . I can’t see any one sponsor having the right to adjust or alter any image, as it would impact on the rights of the others.” Consequently, brands such as TAG Heuer, Honda, and Heuer-Packard enter an odd creative relationship with tobacco brands, with their one degree of separation being the racing property itself.

Tobacco marketers would not likely initiate this creative relationship, although they would warmly welcome it in most cases, and it is anticipated and encouraged to some extent in the design of the sponsorship deals. Peri Luel, vice-president of partners’ programmes at Molstar Sports and Entertainment which manages major racing events such as the Molson Indy, explains that while co-branding “is not one of the factors that get played up significantly [in sponsorship offerings], it’s inherently part of it”. Luel declined any comment on the way tobacco deals with the tobacco industry, but his remarks support the understanding that the tobacco companies’ orientation to their co-sponsors is opportunistic rather than proactive. It is unlikely that tobacco companies would offer or be invited to share production or media costs for this kind of third party advertising; there are strong political and perceptual reasons for these creative partners to stay at arm’s length. The advertising and promotions practitioner quoted at the beginning of this section acknowledges that tobacco marketers will “go for a ride on anything they can”, but goes on to explain that any exchange of money to help cover advertising costs “would be extremely risky for the tobacco company to be involved in. The fallout with the public and legislators would not be worth it . . . they have enough problems staying out of trouble on their own. [The tobacco company and the primary advertiser] would probably be the recipients of adverse synergy: 1 + 1 = more than twice the heat.” This appears to have been the case in June 2001, when both TAG Heuer and Reemtsma, the maker of West cigarettes, were scrutinised by the French publication Le Monde after West branding elements appeared in a TAG Heuer billboard that featured an F1 car (as seen in fig 1). 13 TAG Heuer was accused in the press of violating French laws governing tobacco advertising, and defended itself by saying that as a McLaren Mercedes sponsor it was required to use official team images.

In a climate of increasing regulation and scrutiny of tobacco marketing, other corporate players in the racing environment are not eager to be seen as tobacco’s willing co-conspirators and risk doing damage to their own valuable brands. Brand managers at large established firms are understandably risk averse, and they incur some risk already by complying with sponsorship guidelines regarding use of images, as the TAG Heuer controversy shows. A senior strategic planner at a major Canadian advertising agency, with tobacco experience in the UK, speculates on the advertiser’s position: “A good partnership is where each party brings positive value to the other . . . I don’t think TAG, for example, would respond well to a tobacco company coming to them with the thought of a joint programme. TAG wanted the association with motor sports, and the tobacco logos came along with that. Of course the tobacco company would have been very happy about this.”

The two advertising industry sources quoted in this paper cannot point to even one example of traditionally planned co-branded advertising activity that includes a tobacco brand,
but the third party advertising that emerges from sponsorship must be recognised as a form of co-branding, despite the fact that it is not a consensual act between like minded corporate partners. In the moment of viewing a poster, print piece, or billboard, most consumers will not speculate or care about the process behind it, or make a distinction between active and passive partnerships. The end result is the same. Sponsorship creates a unique advertising space in this way—relationships develop between brands that would never have been possible through open, direct negotiation because of the serious public relations risks involved for all parties.

A final factor in understanding third party tobacco advertising is the art director’s point of view. Credibility is an important agency consideration when the creative goal is to exploit a brand’s connection with racing as much as possible; according to Peri Luel of Molstar, maximum leverage of the property is the core lesson of “Sponsorship Marketing 101”. This principle in action has potential advantages for tobacco marketers, because tobacco branding has been strongly associated with motor sports for many years, and to avoid showing it in a racing advertisement might under some circumstances be perceived by the professionals who create these ads as slightly jarring to the target consumer (that is, undermining rather than reinforcing the advertiser’s connection with the sport). Even if the sponsorship contract permitted it, a digitally altered or “cleaned up” car would not, from the perspective of the agency creative department, be as compelling as an image as the real thing—cluttered, colourful, and in many cases (depending on the racing team and circuit) displaying a tobacco message.

CONCLUSION

Through third party advertising, tobacco brand names continue to attain visibility and the symbolic value of the brands are further enriched as a result of surrounding product complements. While cost efficiencies may also be fulfilled through third party advertising and co-branding activities, the senior advertising practitioners interviewed for this paper consistently maintained that tobacco companies are highly unlikely to assist with the costs of such advertising. Considering the long standing, dominant presence of tobacco companies in motor sports, however, the advertising practitioners continued by claiming that many co-sponsors likely depict tobacco livery in their advertising in an effort toward being “authentic” and to adhere to the stipulations outlined in sponsorship contracts. As tobacco sponsorship becomes less commonplace in auto racing as a result of newly implemented policies within many jurisdictions, it will be important to monitor that the prevalence of tobacco imagery depicted in advertising declines accordingly.

Third party advertising, much like sponsoring broadcast sport events, represents an opportunity for tobacco manufacturers to circumvent tobacco promotion regulations. As tobacco control policies are developed, such loopholes need to be anticipated and accounted for. What remains problematic, however, are jurisdictional issues. When the European Commission stipulated that tobacco sponsorships in F1 would be banned in 2006, for example, it was threatened that races might be moved out of Europe and held in alternative locations such as China, South Korea, and Indonesia (where restrictions on tobacco promotion are much less severe).[3] Since domestic bans on tobacco sponsorship are typically not applicable to foreign media imported or transmitted into the respective country, many of F1’s 300 million television viewers watching each race would remain exposed to tobacco promotions.[3] In light of such opportunities to exploit loopholes, a global treaty that deals with transnational and transborder dimensions of tobacco promotion appears justified.
