

Supp. Fig. 1 Body weight of female mouse exposed for six months to waterpipe smoke. Shown is the linearized plot (y-axis \log_{10}) of body weights from the mouse exposed to WP smoke using product 2. According to a linear regression analysis, body weight changed similarly in the waterpipe regimens (Low, Mod. Beirut, High) and the filtered air control (FA). Supp. Table 1 shows the statistics of the linear regression. In the experiment with product 1, body weight records are unavailable. The error bars represent standard error. Sample number (n) per regimen at the final time point (6 months): FA, (18); Low (19); Mod. Beirut (20); High (20).
