# Supplementary material for Patterns of poly tobacco use in the Population Assessment of Tobacco and Health (PATH) study, 2013-2017: a multistate Markov transition analysis

**Suplemental Figure 1.** The reduced Q matrix used for multistate modeling. Zero cells mean that the one-step instantaneous transition is not allowed, and that it goes through a latent unobserved state. Cigs = cigarettes, E-Cigs = e-cigarettes, OC = other combustibles, SLT = smokeless tobacco, Polyuse + Cigs is any product combination of three or more products that includes cigarettes, Polyuse no Cigs is any product combination of two or more products that does not include cigarettes.

**Supplemental Table 1.** Confidence intervals for modeled cumulative 1-wave transition probabilities with no covariate adjustment. Cigs = cigarettes, E-Cigs = e-cigarettes, OC = other combustibles, SLT = smokeless tobacco, Polyuse + Cigs is any product combination of three or more products that includes cigarettes, Polyuse no Cigs is any product combination of two or more products that does not include cigarettes.

**Supplemental Table 2.** HR estimates and confidence intervals for all sociodemographic groups for each allowed transition (from univariable models). NH: Non-Hispanic, HS: high school, OC: other combustibles, SLT: smokeless tobacco. Cigs = cigarettes, E-Cigs = e-cigarettes, OC = other combustibles, SLT = smokeless tobacco, Polyuse + Cigs is any product combination of three or more products that includes cigarettes, Polyuse no Cigs is any product combination of three products that does not include cigarettes Sig represents significance at the  $\alpha$ =0.05 level.
