

Table A2 Pearson correlation coefficients between dependent and predictor variables in the model for reach¹

| Predictor variables | Dependent variable and predictor variables ² | | | |
|---------------------|---|-------|-------|------|
| | V0 | V1 | V2 | V3 |
| V1 | .72 | | | |
| V2 | -0.27 | -0.06 | | |
| V3 | 0.28 | 0.03 | -0.05 | |
| V4 | 0.17 | -0.09 | -0.16 | 0.21 |

Notes

1. Sample size: 74

2. Variables were labelled as follows:

Dependent variable

V0 log (Reach)

Predictor variables

V1 Whether a HAZ

V2 Number of months before service expected to work at full capacity

V3 Percentage of users receiving individual support

V4 Strength of relationship of services with local PCGs/PCTs
